

ATTACHMENT A

**CARRIER-TO-CARRIER PERFORMANCE PLAN**

1. SBC/Ameritech shall provide the Commission with performance measurement results,<sup>1</sup> on a monthly basis in an Excel spreadsheet format, demonstrating SBC/Ameritech's monthly performance provided to the aggregate of all CLECs in the SBC/Ameritech Service Area within each of the 13 SBC/Ameritech States, as compared to SBC/Ameritech's retail performance (where applicable) or as compared to a benchmark. SBC/Ameritech shall also provide the Commission, state commissions in the SBC/Ameritech States, and CLECs with access to SBC/Ameritech's Internet website, where these parties can obtain performance measurement results demonstrating SBC/Ameritech's monthly performance provided to the aggregate of all CLECs, as compared to SBC/Ameritech's retail performance (where applicable). SBC/Ameritech shall also provide the CLECs with access to SBC/Ameritech's Internet website where a CLEC can obtain performance measurement results demonstrating SBC/Ameritech's monthly performance provided to that same CLEC on an individual basis. All such CLEC-specific data shall be made available, subject to protective agreements, to the Commission on SBC/Ameritech's Internet website, and will be made available for review, subject to protective agreements, by state commissions in the SBC/Ameritech States.

2. SBC/Ameritech's implementation of the Plan does not limit either the Commission's or the states' authority regarding performance monitoring, in the context of applications for in-region, interLATA relief under 47 U.S.C. § 271 or otherwise.<sup>2</sup>

3. The performance measurements, benchmarks, and statistical methods utilized in the Plan were based upon those developed in the Texas and California collaborative processes involving SBC/Ameritech's applications for in-region interLATA relief. The performance measurement business rules in Attachment A-2a differ from those approved by the Texas state commission in the following respects:<sup>3</sup>

- a. The Plan requires payments to be made to the U.S. Treasury on Measurements #4d, 7, and 13b at the Low level, while in the Texas plan no payments to the Texas State Treasury are made on these measurements;
- b. The benchmark for Measurement #1 in the Plan does not require the average of the remainder to be within 20% of the benchmark;

<sup>1</sup> The Commission understands that these "performance measurement results" shall consist of data collected according to the 20 performance measurements discussed in this Attachment, and listed in Attachments A-1a and A-1b.

<sup>2</sup> The Commission notes that SBC/Ameritech's Plan constitutes the Applicants' voluntary proposal for monitoring and remedying the specific potential public interest harms identified in the merger. In contrast, performance programs being developed by state commissions, particularly in the context of section 271 proceedings, serve a different purpose and may be designed to cover more aspects of local competition in order to prevent backsliding on requirements enumerated in section 271. See Order, Section VII.B. (Adopted Conditions).

<sup>3</sup> The fact that these modifications were made should not be interpreted as reflecting the Commission's preference for these modifications over the business rules approved by the Public Utility Commission of Texas.

Deleted: 03/13/03

Inserted: 03/13/03

Deleted: 03/12/03

Inserted: 03/12/03

- c. Measurement #16 in the Plan includes additional disaggregation for LNP and LNP with loop;
- d. The benchmark for Measurement #19 is 99% in the Plan, and 99.5% in the Texas plan; and

The performance measurement business rules in Attachment A-2b are those approved by the California state commission.

4. SBC/Ameritech and the Chief of the Common Carrier Bureau shall jointly review the 20 measurements on a semi-annual basis, to determine whether measurements should be added, deleted, or modified. SBC/Ameritech shall provide the Chief of the Common Carrier Bureau with notice of any changes to the design or calculation of these measurements adopted by the Texas or California state commissions. SBC/Ameritech shall incorporate such changes into the Plan in Texas and California, unless directed not to do so by the Chief of the Common Carrier Bureau within 5 days of receiving notice of such changes. The Chief of the Common Carrier Bureau shall, at the next semi-annual review, determine whether and when SBC/Ameritech shall implement such changes adopted by the Texas state commission in the remaining SBC/Ameritech States except for California and Nevada, and whether and when SBC/Ameritech shall implement such changes adopted by the California state commission in Nevada.

### **Performance Measurements**

5. In each SBC/Ameritech State, the Plan shall consist of 20 measurements of performance that may have a direct and immediate impact upon a CLEC's end user customer.<sup>4</sup> The 20 performance measurements are designed to demonstrate whether SBC/Ameritech is providing parity or benchmark performance in its Service Areas to each CLEC. Attachments A-1a and A-1b provide a list of the 20 performance measurements, and Attachments A-2a and A-2b provide a description of the definitions, exclusions, business rules, levels of disaggregation, calculation, and reporting structure for each of the 20 performance measurements.

6. Where SBC/Ameritech provides a CLEC with a service that has a retail analog, the performance SBC/Ameritech provides to its own retail operations within a state shall be compared with the performance SBC/Ameritech provides to the CLEC within the same state to determine if parity exists. Where SBC/Ameritech provides a CLEC a service for which there is no retail analog, the performance SBC/Ameritech provides to the CLEC within a state shall be compared with a benchmark.

<sup>4</sup> The Commission reiterates that SBC/Ameritech's selection of these 20 measurements for the purposes of this merger-related Plan has no necessary bearing on the appropriate scope of a performance assurance plan designed in the section 271 context.

Deleted: 03/13/03

Inserted: 03/13/03

Deleted: 03/12/03

Inserted: 03/12/03

7. Generally accepted statistical analyses – i.e., modified Z-tests and a critical Z-value – shall be utilized to determine whether SBC/Ameritech is in parity or has met the benchmark. Attachment A-3 provides a description of how these statistical analyses shall be used.

### **Voluntary Payments**

8. The Plan shall also consist of voluntary payments to the U.S. Treasury, with monthly and annual caps for the SBC/Ameritech Service Area (allocated on a per state basis). The 20 performance measurements are categorized as being in either the High, Medium, or Low payment level. Attachments A-5a and A-5b provide a list of the 20 performance measurements and the payment level that applies each year. Attachment A-4 provides a table of the voluntary payments, setting forth the per occurrence and per measurement payments at the High, Medium, and Low levels, and the caps for those measurements where voluntary payments are made on a per occurrence basis with a cap. Attachment A-6 provides the per state monthly and annual caps that apply each year. The obligation to make these voluntary payments in all SBC/Ameritech States except Connecticut attaches 270 days after the Merger Closing Date. The obligation to make these voluntary payments in Connecticut attaches 15 months after the Merger Closing Date.

9. SBC/Ameritech shall make voluntary payments to the U.S. Treasury if SBC/Ameritech fails to provide parity or benchmark performance to the aggregate of all CLECs operating in the SBC/Ameritech Service Area in an SBC/Ameritech State on any measurement<sup>5</sup> for either (1) 3 consecutive months, or (2) 6 months or more in a calendar year, as determined by use of the modified Z-tests and a critical Z-value. Voluntary payments for each SBC/Ameritech State shall be made on a per occurrence or per occurrence with a cap basis for measurements listed in Schedule A and on a per measurement basis for measurements in Schedule B of Attachments A-1a and A-1b, applying the statistical analyses and the calculations described in Attachment A-3, the payment level for the measurements in Attachments A-5a and A-5b, and the per-occurrence and per-measurement voluntary payment amounts set forth in Attachment A-4. The voluntary payments shall be calculated on the rolling average of occurrences or measurements, as appropriate, where SBC/Ameritech has failed to provide parity or benchmark performance for 3 consecutive months.<sup>6</sup> If SBC/Ameritech fails to provide parity or benchmark

<sup>5</sup> The Commission understands that the word “measurement” in this context does not refer to the 20 measurements listed in Attachment A-1a and A-1b, but instead refers to each disaggregated sub-measurement into which the 20 performance measurements are divided. Accordingly, the Commission understands that this Plan will not merely aggregate the various sub-measurements and levels of disaggregation into one score for each of the 20 performance measurements, and then assess whether a voluntary payment is due. Instead, the Commission understands that SBC/Ameritech shall make a voluntary payment as required for any disaggregated sub-measurement. For example, the Commission understands that the number of repeat trouble reports for residential POTS service within a state would represent a distinct disaggregated sub-measurement, and that payment would be due if SBC/Ameritech’s performance under this disaggregated sub-measurement is below par for three consecutive months.

<sup>6</sup> The Commission understands that SBC/Ameritech would make a voluntary payment in the event it fails to provide parity of benchmark performance for three consecutive months, and another payment if the failure continues for a fourth consecutive month, and so on. In each case, the payment would be calculated according to the rolling average of occurrences for the last three consecutive out-of-parity months. For example, if SBC/Ameritech is out-of-parity on a measurement for January, February and March, it would make a payment

Deleted: 03/13/03

Inserted: 03/13/03

Deleted: 03/12/03

Inserted: 03/12/03

performance in an SBC/Ameritech State for 6 or more months in a calendar year, the voluntary payments shall be calculated as if all such months were missed consecutively.<sup>7</sup>

10. In order to ensure that CLECs which order low volumes of certain resold local services and UNEs and that CLECs operating in emerging markets receive parity and benchmark performance, SBC/Ameritech shall increase the voluntary payments calculated in accordance with Paragraph 9 above for measurements 4a-c and 5-13 (“qualifying measurements”) and for sub-measurements involving UNE combinations, resold ISDN, ISDN UNE loop and port, BRI loop with test access (i.e., ISDN), and DSL loops within the qualifying measurements where applicable (“qualifying sub-measurements”).<sup>8</sup> For these 25 qualifying measurements and 36 qualifying sub-measurements, the voluntary payments calculated using the 3 month rolling average described in Paragraph 9 above shall be multiplied by a factor of 3 under the following circumstances and pursuant to the following methodology. The provisions of this Paragraph 10 only apply in the event that a voluntary payment is owed for a qualifying measurement or qualifying sub-measurement per the provisions of Paragraph 9 (i.e., this Paragraph only applies in the event that SBC/Ameritech has failed to provide parity or benchmark performance on a qualifying measurement or qualifying sub-measurement for 3 consecutive months or in 6 or more months in a calendar year.)

a. Qualifying Measurements. If, for the 3 months that are utilized to calculate the rolling average, there were 100 or more observations on average for the qualifying measurement, then no increase in voluntary payments is owed pursuant to the provisions of this Subparagraph, but the provisions of Subparagraph (b) may apply. If, for the 3 months that are utilized to calculate the rolling average, there were more than 10 but less than 100 observations on average for the qualifying measurement, then (1) SBC/Ameritech shall calculate the voluntary payments to the U.S. Treasury for that qualifying measurement in accordance with Paragraph 9 and shall treble the amount of such voluntary payments for that qualifying measurement, and (2) the provisions of Subparagraph (b) shall not apply with respect to any qualifying sub-measurements within the qualifying measurement.

b. Qualifying Sub-Measurements. If, for the 3 months that are utilized to calculate the rolling average, there were 100 or more observations on average for the qualifying sub-measurement, then no increase in voluntary payments is owed pursuant to the provisions of

---

based on the January-February-March average; if it is also out-of-parity for the same measurement in April, it would make another payment, based on the February-March-April average.

<sup>7</sup> By assessing the payments “as if all such months were missed consecutively,” the Commission understands that four payments would be made in a year where a measure is out-of-parity for six months (and five payments in a year where a measure is out-of-parity for seven months, and so on).

<sup>8</sup> The Commission recognizes that the use of the terms “qualifying measurement” and “qualifying sub-measurement” may generate some confusion (in particular, because the terms “measurement” and “sub-measurement” are not used consistently, *see supra* note 5). The Commission interprets the term “qualifying measurement” as applying to the following 25 measurements and sub-measurements: 4a, 4b, 4c, 5a, 5b, 5c, 6a, 6b, 6c, 7a, 7b, 7c, 8, 9, 10a, 10b, 11a, 11b, 11c, 12a, 12b, 12c, 13a, 13b and 13c. The Commission interprets the term “qualifying sub-measurements” as applying to the 36 disaggregated sub-levels of these “qualifying measurements” that correspond to the following resale services and UNEs: UNE combinations (applicable to 4a, 5a, 6a, 7a, 10a, 11a, 12a, and 13a); resold ISDN, and ISDN UNE loop and port (applicable to 4b, 5b, 6b, 7b, 11b, 12b, and 13b); and BRI loop with test access, and DSL loops (applicable to 4c, 5c, 6c, 7c, 11c, 12c, and 13c).

Deleted: 03/13/03

Inserted: 03/13/03

Deleted: 03/12/03

Inserted: 03/12/03

this Subparagraph. If, for the 3 months that are utilized to calculate the rolling average, there were more than 10 but less than 100 observations on average for the qualifying sub-measurement, then SBC/Ameritech shall calculate the voluntary payments to the U.S. Treasury for that qualifying sub-measurement in accordance with Paragraph 9 and shall treble the amount of such voluntary payments for that qualifying sub-measurement. Per the provisions of Subparagraph (a), the provisions of this Subparagraph do not apply to any qualifying sub-measurements within a qualifying measurement for which treble voluntary payments are owed.

c. When SBC/Ameritech and the Chief of the Common Carrier Bureau jointly review the 20 measurements on a semi-annual basis in accordance with Paragraph 4, the Chief of the Common Carrier Bureau may substitute, on a one-for-one basis, the sub-measurements associated with any other existing service or UNE within measurements 4a, 4b, or 4c for the initial set of qualifying sub-measurements.<sup>9</sup> During this semi-annual review, the Chief of the Common Carrier Bureau may also increase the number of qualifying sub-measurements by including, from the list of qualifying measurements, the sub-measurements associated with new services and/or UNEs as qualifying sub-measurements. The Chief of the Common Carrier Bureau may add a maximum of 3 such new services and/or UNEs over the duration of the Plan.<sup>10</sup>

11. The monthly and annual caps on the total amount of voluntary payments for which SBC/Ameritech shall be liable, as provided for in Attachment A-6, may be reduced by an amount up to \$125 million in the third year of the Plan if SBC/Ameritech completes the OSS enhancement commitments provided for in Paragraph 15(c), Paragraphs 26-28, and/or Paragraph 31 by a date that is sooner than the target dates for the OSS commitments specified in such Paragraphs, as follows:

a. The monthly and annual caps on the total amount of voluntary payments for which SBC/Ameritech shall be liable may be reduced by an amount up to \$45 million during the third 12 month period if SBC/Ameritech completes the OSS enhancement commitments provided for in Paragraph 15(c) early. If SBC/Ameritech completes Phase 3 of Paragraph 15(c) within the SBC/Ameritech Service Area in all SBC/Ameritech States except Connecticut earlier than 14 months after the Merger Closing Date, excluding any time that is spent in completing Phase 2 beyond the 30 days allotted for reaching a written agreement with the CLECs, the annual caps shall be reduced by \$10 million if 30 days early, \$15 million if 60 days early, \$20 million if 90 days early, \$25 million if 120 days early, \$35 million if 150 days early, and \$45 million if 180 days early.

<sup>9</sup> The Commission understands that the Chief of the Common Carrier Bureau may elect to substitute, for example, all “qualifying sub-measurements” relating to resold ISDN (*i.e.*, 4b, 5b, 6b, 7b, 11b, 12b, and 13b) with the corresponding sub-measurements relating to another resold service or UNE (such as resold DS1 service, or a new resold service which SBC/Ameritech may offer in the future).

<sup>10</sup> The Commission understands that, by selecting 8 dB loop, DS1 Loop and Dark Fiber as such “new services and/or UNEs,” the Chief of the Common Carrier Bureau would effectively add to the “multiplier” provision of the Plan a total of 21 new qualifying sub-measurements (*i.e.*, the disaggregated sub-measurements corresponding to these UNEs under 4c, 5c, 6c, 7c, 11c, 12c, and 13c). Under this example, the Chief of the Common Carrier Bureau would be unable to add more new services and/or UNEs to the “multiplier” provision (as the limit of three would be spent), but could still substitute services and/or UNEs, as set forth in Paragraph 10c and note 9.

Deleted: 03/13/03

Inserted: 03/13/03

Deleted: 03/12/03

Inserted: 03/12/03

b. The monthly and annual caps on the total amount of voluntary payments for which SBC/Ameritech shall be liable may be reduced by an amount up to \$40 million during the third 12 month period if SBC/Ameritech completes the OSS enhancement commitments provided for in Paragraphs 26-28 early. If SBC/Ameritech completes Phase 3 of Paragraph 28 within the SBC/Ameritech Service Area in all SBC/Ameritech States except Connecticut within less than 24 months after the Merger Closing Date, excluding any time that is spent in completing Phase 2 beyond the 30 days allotted for reaching a written agreement with the CLECs, the annual caps shall be reduced by \$5 million if 30 days early, \$10 million if 60 days early, \$15 million if 90 days early, \$20 million if 120 days early, \$30 million if 150 days early, and \$40 million if 180 days early.

c. The monthly and annual caps on the total amount of voluntary payments for which SBC/Ameritech shall be liable may be reduced by an amount up to \$45 million during the third 12 month period if SBC/Ameritech completes the OSS enhancement commitments provided for in Paragraph 31 early. If SBC/Ameritech completes Phase 3 of Paragraph 31 within the SBC/Ameritech Service Area in all SBC/Ameritech States within less than 30 months after the Merger Closing Date, excluding any time that is spent in completing Phase 2 beyond the 30 days allotted for reaching a written agreement with the CLECs, the annual caps shall be reduced by \$5 million if 30 days early, \$10 million if 60 days early, \$15 million if 90 days early, \$20 million if 120 days early, \$30 million if 150 days early, and \$40 million if 180 days early.

d. Any required reductions in the annual cap during the third 12-month period pursuant to Subparagraphs (a)-(c) above shall be prorated across all 13 SBC/Ameritech States and apportioned to monthly caps utilizing the same ratios used to develop the tables in Attachment A-6.

12. The amount of payments otherwise due each month under this Plan in a state shall be offset by the sum of (1) the amount of any payments made by SBC/Ameritech to private or public parties (including, but not limited to, CLECs, state commissions, state governments, public interest funds or groups, or other entities) each month under any state-approved local interconnection performance monitoring or performance measurement plan in that state, and (2) the amount of payments made by SBC/Ameritech related to performance measurements paid to CLECs each month in that state under the terms of an approved local interconnection agreement with SBC/Ameritech. Provided, however, that the amount of any payments made to affiliates of SBC/Ameritech shall not be used in calculating the offset.

13. Performance measurement results for each month shall be available to the Commission, state commissions and CLECs by the 20th day of the following month. If SBC/Ameritech becomes liable for voluntary payments to the U.S. Treasury, such payments shall be made 30 days after the performance measurement results become available. If such payments are made, SBC/Ameritech shall provide notice to the Commission within 5 business days after the payment is made.

14. SBC/Ameritech shall not be liable for voluntary payments to the U.S. Treasury if SBC/Ameritech's failure to provide parity or benchmark performance is caused by an Act of God, or a *force majeure* event. If SBC/Ameritech determines through "root cause analysis" that

Deleted: 03/13/03

Inserted: 03/13/03

Deleted: 03/12/03

Inserted: 03/12/03

it failed to provide parity or benchmark performance for any reason listed above, SBC/Ameritech may seek a waiver from the Chief of the Common Carrier Bureau relieving SBC/Ameritech from voluntary payments to the U.S. Treasury. SBC/Ameritech shall have the burden of proof to make the required showing, and shall have a right of appeal to the Commission. If SBC/Ameritech seeks such a waiver, SBC/Ameritech shall place the voluntary payments at issue into an interest bearing escrow account. If SBC/Ameritech fails to carry its burden of proof, the amount of voluntary payments paid into the escrow account, including any accrued interest, shall be remitted to the U.S. Treasury. If SBC/Ameritech carries its burden of proof, the amount of voluntary payments paid into the escrow account, including any accrued interest, shall be returned to SBC/Ameritech.

15. Voluntary payments made by SBC/Ameritech under the Plan shall not be reflected in the revenue requirement of an SBC/Ameritech incumbent LEC.

16. The measurements and benchmarks under the Plan bear no necessary relationship to the standard of performance that satisfies SBC/Ameritech's legal obligations in a particular state, and payments under the Plan shall not constitute an admission by SBC/Ameritech of any violation of law or noncompliance with statutory or regulatory requirements with respect to the provision of local facilities or services to SBC/Ameritech's wholesale or retail customers.

## Attachment A-2a

**SBC/AMERITECH PERFORMANCE MEASUREMENT BUSINESS RULES  
(EXCEPT CALIFORNIA AND NEVADA)**

## OSS

<b>1. Measurement</b>
Percent Firm Order Confirmations (FOCs) Returned on time for LSR requests.
<b>Definition:</b>
Percent of FOCs returned within a specified time frame from receipt of a complete and accurate service request to return of confirmation to CLEC
<b>Exclusions:</b>
<ul style="list-style-type: none"> <li>• Rejected (manual and electronic) LSRs</li> <li>• SBC SNET only Disconnect orders</li> <li>• Services ordered out of the Access Tariff</li> <li>• Interconnection Orders</li> <li>• Unbundled Dedicated Transport Orders</li> </ul>
<b>Business Rules:</b>
<p>FOC business rules are established to reflect the Local Service Center (LSC) normal hours of operation, which include M-F, 8:00 AM to 5:00 PM, excluding, holiday and weekends. If the start/time is outside of normal business hours then the start date/time is set to 8:00 AM on the next business day. Example: If the request is received Monday through Friday between 8:00 AM to 5:00 PM; the valid start time will be Monday through Friday between 8:00 AM to 5:00 PM. If the actual request is received Monday through Thursday after 5:00 PM and before 8:00 AM next day; the valid start time will be the next business day at 8:00 AM. If the actual request is received Friday after 5:00 PM and before 8:00 AM Monday; the valid start time will be at 8:00 AM Monday. If the request is received on a Holiday (anytime); the valid start time will be the next business day at 8:00 AM. For LSRs received electronically requiring no manual intervention by the LSC, the OSS hours of operation will be used in lieu of the LSC hours of operation (i.e., actual OSS processing time outside of LSC hours will not be excluded in calculating the interval). The returned confirmation to the CLEC will establish the actual end date/time. Provisions are established within the DSS reporting systems to accommodate situations when the LSC works holidays, weekends and when requests are received outside normal working hours. For UNE Loop and Port combinations, orders requiring N, C, and D orders, the FOC is sent back at the time the C order is distributed.</p> <p>All UNE RS orders are categorized as Simple or Complex in the same manner as Retail or Resale orders are categorized.</p> <p>Business Reference Manual System (BRMS) and/or EXACT are systems required for the engineering of certain complex business and UNE loop products that must take place prior to the request being worked (pre-provisioning).</p>

Deleted: ¶

Deleted: 03/13/03

Inserted: 03/13/03

Deleted: 03/12/03

Inserted: 03/12/03

The BRMS and/or EXACT form must be initiated by the LSC service representative with information from the LSR for services such as Centrex, DIDs, PRI services, ISDN, Centralink services, Basic Multipath services, DS1, DS3, Dark Fiber loops, etc. Once the BRMS and/or EXACT form is completed, the LSC service representative must release it to the other involved departments for review and determination of the design information and to determine the necessary steps to provide the services. This may involve review of TN number availability, design circuit provisioning, translations requirements, etc. to determine the service availability and due date. Depending on the service and complexity of the request, the return of the BRMS and/or EXACT information could be 3-5 days. Therefore, the FOC is to be negotiated for any services that require BRMS and/or EXACT pre-provisioning.

If the CLEC accesses SBC SNET systems using a Service Bureau Provider, the measurement of SBC SNET's performance does not include Service Bureau Provider processing, availability or response time.

### **ENHANCEDLEX/EDI**

For ENHANCEDLEX and EDI originated LSRs, the start date and time is the receive date and time that is automatically recorded by the interface (EDI or ENHANCEDLEX) with the system date / time. The end date and time is recorded by the interface (ENHANCEDLEX and EDI) and reflect the actual date and time the FOC is available to the CLEC. For LSRs where FOC times are negotiated with the CLEC, the ZFOC FID on the SONAR service order is used in the calculation.

For those electronic requests that an associated manual loop qualification is input by the LSC, the start date and time is receipt of a valid LSR and the end date and time is when the FOC FAX is sent back to the CLEC.

The time needed by Outside Network Engineering to complete the manual loop makeup and make available in the Loop Qual system is not included as part of the FOC interval.

### **MANUAL REQUESTS**

Manual service order requests are those initiated by the CLEC either by fax, or other manual methods (i.e. courier). The FAX receipt date and time is recorded and input on the SM-FID on each service order in the service order system for each FOC opportunity. The end time is the actual date and time that a successful attempt to send a paper fax, is made back to the CLEC. . The ZFOC-FID is used when FOC times are negotiated with the CLEC. The LSC populates the ZFOC-FID with data entries that are used in the FOC calculation.

For a manual request that requires an associated loop qualification, the start date and time is receipt of a valid LSR and the end date and time is when the FOC FAX is sent back to the CLEC. The time needed by Outside Network Engineering to complete the manual loop makeup and make available in the Loop Qual system is not included as part of the FOC interval.

**2. Measurement (Non Uniform Interfaces)**

## Average Response Time For OSS Pre-Order Interfaces

**Definition:**

The average response time in seconds from the SBC SNET side of the Remote Access Facility (RAF) and return for pre-order non-uniform interfaces (MSAP/WCIWIN) by function.

**Exclusions:**

None.

**Business Rules:**

The clock starts on the date/time when the request is received by SBC SNET and the clock stops on the date/time when the SBC SNET has completed the transmission of the response to the CLEC. Timestamps are taken at the MSAP and WCIWIN servers and do not include transmission time through the LRAF. Response time is accumulated for each major query type, consistent with the specified reporting dimension, and then divided by the associated total number of queries received by SBC SNET during the reporting period. The response time is measured only within the published hours of interface availability. Published hours of interface availability are documented on the CLEC web site. (SBC SNET will not schedule system maintenance during normal business hours (8 AM to 5:00 PM Monday through Friday). If the CLEC accesses SBC SNET systems using a Service Bureau Provider, the measurement of SBC SNET's performance does not include Service Bureau Provider processing, availability or response time.

For the protocol translation response times, start and end times are as follows:  
MSAP input time starts at the time the CLEC successfully connects to the MSAP Interactive Agent and the end time is when the connection is made to MSAP for processing. MSAP output time starts when the response message is received from MSAP and the end time is when the message is sent to the CLEC.

**5a. Measurement**Percent Trouble Report Within X Days (I-10/I-30) of Installation**Definition:**

Percent of N, T, C orders, (by circuit for specials) that receive an electronic or manual trouble report on or within 10 calendar days for POTS/UNE-RS, or 30 calendar days for specials, of service order completion.

**Exclusions:**

- Excludes subsequent reports. A subsequent report is a repair report that is received while an existing repair report is open on the same number.
- Excludes reports classified as excludable (Official Category -OFFCAT - greater than "1").
- Excludes reports caused by customer provided equipment (CPE) or wiring Interexchange Carrier/Competitive Access Provider, and Informational
- Excludes trouble report received on the due date before service order completion
- Excludes Stand Alone UNE and Interconnection Trunks

**Business Rules:****POTS/UNE-RS**

Includes reports received the day after SBC SNET personnel complete the service order through 10 calendar days after completion. The denominator for this measure is the total count of orders posted within the reporting month. (However, the denominator will at a minimum equal the numerator). The numerator is the number of trouble reports received within 10 days of service order completion. These will be reported the month that they are closed. This will include troubles taken on the day of completion found to be as a result of a UNE-RS conversion.

Resale specials

A trouble report is counted if it is flagged on WFA (Work Force Administration) as a trouble report that had a service order completion within 30 days. It cannot be a repeat report. The order flagged against must be an addition in order for the trouble report to be counted. Specials are selected based on a specific service code off of the circuit ID. . The denominator for this measure is the total count of orders posted within the reporting month. (However, the denominator will at a minimum equal the numerator). The numerator is the number of trouble reports received within 30 days of service order completion and closed within the reporting month.

**Business Rules:**POTS –

The clock starts on the Application Date, which is the day that SBC SNET receives a correct Service Order/LSR (Enhanced LEX or EDI). The clock stops on the Completion Date that is the day that SBC SNET personnel complete the service order activity. Orders are included in the month they are completed. There are 2 types of orders in the measurement. Same Day Due orders (defined as distribution time EQUAL or BEFORE 3:00 PM and Application Date = Distribution Date = Due Date. Next Day Due orders (defined as distribution time AFTER 3:00 PM and Application Date = Distribution Date and Due Date is 1 business day after Application Date. If the order is Same Day Due, then (Completion – Application Date), if the order is Next Day Due, then ((Completion – Next Business Day) + 1). UNE-RSs, are reported at order level. Customer not ready/no access situation will be found to be SBC SNET caused missed due date outside the CLEC provided access hours.

**6c.1 Measurement**

Percent Installations Completed within the Customer Requested Due Date for LNP With Loop

**Definition:**

Percent installations completed within the customer requested due date when that date is greater than or equal to the standard offered interval as defined in the CLEC manual or if expedited (accepted or not accepted), the date agreed to by SBC\_SNET

**Exclusions:**

- Specials and Interconnection Trunks.
- Excludes UNE Combinations captured in the POTS or Specials measurements.
- Exclude orders that are not N, T, or C.
- Excludes customer caused misses.
- NPAC caused delays unless caused by SBC SNET.

**Business Rules:**

The start time is the date of the receipt of an accurate LSR. The Completion Date is the day that SBC SNET personnel complete the service order activity. If the CLEC submits the LSR prior to 3:00 p.m. the CLEC may request a 3 day interval. If the LSR is submitted after 3:00 p.m. the CLEC can request a 4 day interval. The base of items is out of WFA (Work Force Administration) and it is reported at an order level to account for different measurement standards based on the number of circuits per order.

For partial LNP conversions that require restructuring of customer account:

- 1-30 TNs: Add one additional day to the FOC interval. The LNP due date intervals will continue to be three business days and five business days from the receipt of the FOC depending on whether the NXX has been previously opened or is new.
- >30 TNs, including entire NXX: The due dates are negotiated.

**Levels of Disaggregation:**

- Aggregate
  - Loop with LNP (1-10)

**7c. Measurement****Average Delay Days For SBC SNET Caused Missed Due Dates****Definition:**

Average calendar days from the customer requested due date when that date is greater than or equal to the offered interval, or if expedited (accepted or not accepted), the date agreed to by SBC SNET that is the due date reflected on the FOC, to completion date on company missed UNEs (8db loops are measured at an order level).

Deleted: which

**Exclusions:**

- Specials and Interconnection Trunks.
- Excludes UNE-RS captured in the POTS or Specials measurements.
- Excludes orders that are not N, T, or C.
- Excludes any incremental days attributable to the CLEC after the initial SBC SNET caused delay. Does not exclude No Access attributable to the end user after the initial due date has been missed by SBC SNET.

Deleted: UNE Combo

Deleted: s

**Business Rules:**

The calculation is the difference in calendar days between the completion date and the FOC due date. The Due Date is the customer requested due date when that date is greater than or equal to the offered interval. If expedited (accepted or not accepted), the Due Date is the date agreed to by SBC SNET, which is the due date reflected on the FOC. The data is reported at a circuit level UNEs are selected based on a specific service code off of the circuit ID. This measurement is reported at a circuit level for all UNEs with the exception of 8db loops, which are reported at an order level to facilitate comparison with POTS retail.

**Levels of Disaggregation:**

UNEs contained in the SBC SNET CT Access Tariff, and/or agreed to by parties.

**8. Measurement**

Average Installation Interval - DSL

**Definition:**

Average business days from application date to completion date for N, T, and C orders excluding customer caused misses and customer requested due date greater than the offered interval.

**Exclusions:**

- Exclude orders that are not N, T, or C.
- Excludes customer requested due dates greater than the offered interval
- Excludes customer caused misses.
- Excludes Weekends and Holidays.
- Excludes expedites (less than 3 days).
- Excludes Rejects for non-conformance as to PSD masks if, and only if, the CLEC requests such qualification on the LSR
- Excludes any incremental days attributable to the CLEC after the initial SBC SNET caused delay. Does not exclude No Access attributable to the end user after the initial due date has been missed by SBC SNET.

Deleted: 03/13/03

Inserted: 03/13/03

Deleted: 03/12/03

Inserted: 03/12/03

**Business Rules:**

The Application Date is the day that the customer authorizes SBC SNET to provision the DSL based on the loop qualification. . If the CLEC uses the “one-step” process (combined loop qualification request and LSR), and the loop qualification determines that the existing loop, in its current condition, meets the CLEC’s specifications, SBC SNET will initiate the service order when the loop qualification is returned from SBC SNET engineering and this date will be the application date. If the loop in its current condition does not meet the CLEC’s specifications, SBC SNET will reject the LSR back to the CLEC and wait for a supplement from the CLEC notifying SBC SNET of the appropriate action to take. If the CLEC supplements the LSR to order the DSL, SBC SNET will issue the order and the application date will be the date that SBC SNET receives the supplement. If the CLEC uses the “two-step” process (loop qualification performed on a pre-order basis) or waives the loop qualification for a loop that pre-qualifies as “green,” SBC SNET will issue the order upon receipt of a valid LSR and the Application Date will be the date that SBC SNET receives the valid LSR. The Completion Date is the day that SBC SNET personnel complete the service order activity. If the CLEC has requested that Cooperative Acceptance Testing be performed on the loop, the Completion Date is the day that successful Cooperative Acceptance Testing is completed. This is reported at a circuit level.

NOTE: For all of the above scenarios, the CLEC’s specifications for the loop will be considered met under the following circumstances:

If the CLEC has specified “AS IS” on the initial LSR, the loop meets the CLEC’s specifications if the loop qualification does not show that the end user’s address is served exclusively by Digital Loop Carrier (“DLC”).

If the CLEC has pre-authorized conditioning on the initial LSR, the loop meets the CLEC’s specifications if the loop qualification does not show that the end user’s address is served exclusively by DLC. Any load coils, repeaters and/or bridged/end tap greater than or equal to 2.5 kft, revealed on the loop qualification will be removed per the requirements of the SPEC code. If the CLEC pre-authorizes conditioning, CLEC will not have to provide an additional LSR requesting provision of the loop.

**Levels of Disaggregation:**

- Loops requiring no conditioning with Line Sharing
- Loops requiring conditioning with Line Sharing
- Loops requiring no conditioning with no Line-Sharing
- Loops requiring conditioning with no Line-Sharing
- Loops requiring no conditioning with Line Splitting
- Loops requiring conditioning with Line Splitting
- Broadband service product (Note: Additional disaggregations may be required as necessary in the future.)

**9. Measurement****Average Response Time for Manual Loop Make-Up Information****Definition:**

The average time required to provide loop qualification for XDSL capable loops measured in business days.

**Exclusions:**

Manual requests for Loop Makeup Information not initiated by the CLEC; however, manual requests initiated by the LSC as part of the ordering process when no mechanized loop qualification data is available will be included.

**Business Rules:**

For an EDI/CORBA, MSAP, WCIWIN or Enhanced Verigate initiated request, the start date and time is when the request is received in the Loop Qual System. The end date and time for the EDI/CORBA, MSAP, WCIWIN or Enhanced Verigate request is when the loop makeup information has either has been e-mailed back to the CLEC or, if the CLEC does not want email, is available in the Loop Qual System.

For manual requests for Loop Makeup Information initiated by the LSC as part of the ordering process, the start date and time is the receipt date and time of the good LSR. The end date and time is when the loop makeup information is available in the Loop Qual System.

**Levels of Disaggregation:**

Deleted and Combined with PM 12a

A handwriting practice sheet with multiple rows of lines. Each row consists of a solid top line, a dashed middle line, and a solid bottom line. The rows are shaded in alternating light gray and white. Small yellow triangles and black dots are placed at various points along the lines to guide letter formation and placement.

**15. Measurement****Percent Trunk Blockage****Definition:**

Percent of calls blocked on outgoing traffic for alternate final (AF) and direct final (DF) trunk groups from SBC SNET end office to CLEC end office and from SBC SNET tandem to CLEC end office

**Exclusions:**

- Excludes Weekend and Holidays
- CLECs have trunks busied-out for maintenance at their end, or if they have other network problems which are under their control.
- SBC SNET is ready for turn-up on Due Date and CLEC is not ready or not available for turn-up of trunks. , e.g. not ready to accept traffic from SBC SNET on the due date or CLEC has no facilities or equipment at CLEC end.
- CLEC does not take action upon receipt of Trunk Group Service Request (TGSR) or ASR within 3 business days (day 0 is the business day the TGSR when a Call Blocking situation is identified by SBC SNET or in the timeframe specified in the ICA.
- If CLEC does not take action upon receipt of TGSR within 10 business days (day 0 as described above) when a pre-service of 75% or greater occupancy situation is identified by SBC SNET for a time frame specified in the ICA.
- If CLEC fails to provide a forecast within the last six months unless a different timeframe is specified in an interconnection agreement.
- For trunks extending from the SBC SNET tandem to the CLEC end office designated as direct end office trunks, if CLEC's actual trunk usage for a market region, as shown by SBC SNET from traffic usage studies, is more than 25% above CLEC's most recent forecast for the market region, which must have been provided within the last six-months unless a different timeframe is specified in an interconnection agreement as long as the forecasts are received as described in the accessible letter.
- For trunks extending from the SBC SNET end office to the CLEC end office, if CLEC's actual trunk usage for a wirecenter or end office, as shown by SBC SNET from traffic usage studies, is more than 25% above CLEC's most recent forecast for the wirecenter or end office, which must have been provided within the last six-months unless a different timeframe is specified in an interconnection agreement as long as the forecasts are received as described in the accessible letter.

The exclusions do not apply if SBC SNET fails to timely provide CLEC with traffic utilization data reasonably required for CLEC to develop its forecast or if SBC SNET refuses to accept CLEC trunk orders (ASRs or TGSRs) that are within the CLEC's reasonable forecast regardless of what the current usage data is.

## Local Number Portability

**16 Measurement****CHC/FDT LNP with Loop Provisioning Interval.****Definition:**

The % of CHC/FDT LNP with Loop Lines completed by SBC SNET within the established provisioning intervals of 60 minutes (1 – 10 lines) and 120 minutes (11 – 24 lines).

**Exclusions:**

- CHC/FDT LNP with Loop with greater than 24 loops (including multiple LSRs totaling 25 or more lines to the same customer premise on the due date).
- CLEC caused delays (e.g., no dial tone from CLEC: CLEC translations) that do not allow SBC SNET the opportunity to complete CHC/FDT LNP with Loop within the designated interval.
- 

**Business Rules:**

The start time is at the direction of the CLEC and based on a negotiated and scheduled time for coordinated hot cut orders (CHC) and on the frame due time for frame due time (FDT). For CHC orders, the clock starts when the CLEC calls the SBC SNET LOC to start the conversion, and ends when the SBC SNET technician completes the cross connect to the CLEC facilities and has called the CLEC to notify that the cut-over has been completed. For FDT orders, the clock starts at the frame due time and ends when the SBC SNET technician completes the cross connect to the CLEC facilities. This measurement only includes Coordinated Hot Cuts and Frame Due Time with 1-24 loops. A conversion with 25 or more lines (including multiple orders totaling 25 or more lines to the same customer premise on the same due date) is considered a project and is negotiated with the CLEC at the time of conversion.

**Levels of Disaggregation:**

CHC

LNP with loop

- 1- 10 lines
- 11-24 lines

## Collocation

**17. Measurement**

Percent Missed Collocation Due Dates

**Definition:**

The percent of SBC SNET caused missed due dates for Collocation projects.

**Exclusions:**

- Exclude any applications rejected for non-payment within the times requested under tariff
- Exclude if the CLEC has not submitted their second fifty percent (50%) payment prior to the due date, SBC-SBC SNET will exclude the job from reporting.

**Business Rules:**

The clock starts when SBC SNET receives, in compliance with the approved tariff, return of proposed layout for space as specified in the application form from the CLEC. However, for purposes of the measure, once SBC SNET provides a quote to a CLEC, the application is deemed to be in compliance with the approved Tariff. The clock stops when the CLEC receives notice in writing or other method agreed to by the parties that the collocation arrangement is complete and ready for CLEC occupancy, and CFA/APOT information is available to the CLEC. If the CLEC does not accept the collocation space because the space is not complete and ready for occupancy as specified, and notifies SBC SNET of such within 5 business days, the collocation will be considered not complete and the time frame required for the CLEC to reject the collocation space (up to 5 business days) and any additional time required for SBC SNET to complete the space per the specifications will be counted as part of the interval. Any time exceeding the 5 business days will not be counted as part of the interval. Due Date Extensions will be extended when mutually agreed to by SBC SNET and the CLEC, or when a CLEC fails to complete work items for which they are responsible in the allotted time frame. However, a due date extension resulting from SBC SNET notification that it will not meet the required interval, will not be considered a change in the due date for purpose of this measure. Moreover, any change in due date requested by SBC SNET for whatever reason will not be considered to be a change in due date for purpose of this measure. A CLEC-requested extended due date will be calculated by adding to the original due date the number of calendar days that the CLEC was late in performing said work items. Work items include but are not limited to:

- CLEC return to SBC SNET corrected and complete floor plan drawings
- CLEC placement of required component(s)

If the business rules and tariff are inconsistent, the terms of the tariff will apply. If inconsistencies are identified, SBC SNET will bring these forward for discussion at the next 6-month review.

OSS

<b>19. Measurement</b>
OSS Interface Availability
<b>Definition:</b>
Percent of time OSS interface is available compared to scheduled availability.
<b>Exclusions:</b>
None
<b>Business Rules:</b>

- Deleted: 03/13/03
- Inserted: 03/13/03
- Deleted: 03/12/03
- Inserted: 03/12/03

The total “number of hours functionality to be available” is the cumulative number of hours (by date and time on a 24 hour clock) over which SBC plans to offer and support CLEC access to SBC’s operational support systems (OSS) functionality during the reporting period. “Hours Functionality is Available” is the actual number of hours, during scheduled available time, that the SBC interface is capable of accepting or receiving CLEC transactions or data files. The actual time available is divided by the scheduled time available and then multiplied by 100 to produce the “Percent system availability” measure. SBC will not schedule normal maintenance during OSS Hours of availability as posted on the CLEC web site unless otherwise notified via an accessible letter. SBC will not schedule normal maintenance during business hours (8:00 a.m. to 5:00 p.m. Monday through Friday). When interfaces experience partial unavailability, an availability factor is applied to the calculation of downtime. This factor is stated as a percentage and represents the impact to the CLEC. Determination of the availability factor is governed by SBC’s Availability Team on a case by case basis. Disputes related to application of the availability factor may be presented to the Commission. Whenever an interface experiences complete unavailability, the full duration of the unavailability will be counted, to the nearest minute, and no availability factor will be applied. SBC shall calculate the availability time rounded to the nearest minute. Whenever the RAF experiences complete unavailability to a CLEC, the full duration of the unavailability will be counted, to the nearest minute and no availability factor will be applied. SBC will make available to CLECs, documentation of all partial availability determination at the time of reporting affected results.

## Attachment A-3

# **CALCULATION OF PARITY AND BENCHMARK PERFORMANCE AND VOLUNTARY PAYMENTS**

**I. Z-Tests**

- Modified Z-tests, as outlined below, will be used to determine parity when comparing an SBC/Ameritech incumbent ILEC's and the CLEC's results for the difference between two means or two percentages, or the difference in two proportions.
- The modified Z-tests are applicable if the number of data points is greater than 30 for averages or means. For measurements with less than 30 data points SBC SNET may use the permutations test or Alternative-1 described under "Qualifications to use Z-Test heading below.
- Parity exists when the measured results in a single month (whether in the form of means, percents, or proportions) for the same measurement, at equivalent disaggregation, for both **SBC SNET** and the CLEC are used to calculate a Z-test statistic and the resulting value is no greater than the critical Z-value as discussed below.

Deleted: SWBT

- For parity measurement results that are expressed as averages or means:

$$Z = (\text{DIFF}) / \delta_{\text{DIFF}}$$

Where;

$$\text{DIFF} = M_{\text{ILEC}} - M_{\text{CLEC}}$$

 $M_{\text{ILEC}}$  = ILEC Average $M_{\text{CLEC}}$  = CLEC Average

$$\delta_{\text{DIFF}} = \text{SQRT} [\delta_{\text{ILEC}}^2 (1/n_{\text{CLEC}} + 1/n_{\text{ILEC}})]$$

 $\delta_{\text{ILEC}}^2$  = Calculated variance for ILEC. $n_{\text{ILEC}}$  = number of observations or samples used in ILEC measurement $n_{\text{CLEC}}$  = number of observations or samples used in CLEC measurement

- For benchmark measurement results that are expressed as averages or means:

$$z = (\text{DIFF}) / 1$$

Where;

$$\text{DIFF} = \text{Benchmark} - M_{\text{CLEC}}$$

 $M_{\text{CLEC}}$  = CLEC Average

Deleted: 03/13/03

Inserted: 03/13/03

Deleted: 03/12/03

Inserted: 03/12/03

For parity measurement results that are expressed as percentages or proportions:

Step 1:

$$\rho = \frac{(n_{ILEC}P_{ILEC} + n_{CLEC}P_{CLEC})}{n_{ILEC} + n_{CLEC}}$$

Step 2:

$$\sigma_{P_{ILEC}-P_{CLEC}} = \sqrt{[\rho(1-\rho)]/n_{ILEC} + [\rho(1-\rho)]/n_{CLEC}}$$

Step 3:

$$Z = (P_{ILEC} - P_{CLEC})/\sigma_{P_{ILEC}-P_{CLEC}}$$

Where: n = Number of Observations  
P = Percentage or Proportion

- For benchmark measurement results that are expressed as percentages or proportions:

$$Z = (\text{benchmark} - P_{CLEC})/1$$

Where: n = Number of Observations  
P<sub>clec</sub> = Percentage or Proportion for CLEC

- For measurement results that are expressed as rates or a ratio:

$$z = (\text{DIFF}) / \delta_{\text{DIFF}}$$

Where;

$$\text{DIFF} = R_{ILEC} - R_{CLEC}$$

$$R_{ILEC} = \text{num}_{ILEC} / \text{denom}_{ILEC}$$

$$R_{CLEC} = \text{num}_{CLEC} / \text{denom}_{CLEC}$$

$$\delta_{\text{DIFF}} = \text{SQRT} [R_{ILEC} (1/\text{denom}_{CLEC} + 1/\text{denom}_{ILEC})]$$

## **II. Qualifications To Use Z-Test:**

- The proposed Z-tests are applicable to reported measurements that contain 30 or more data points.
- For measurements where the performance delivered to CLEC is compared to SBC SNET performance and for which the number of data points are 29 or less, The following Alternative may be used:

Deleted: 03/13/03

Inserted: 03/13/03

Deleted: 03/12/03

Inserted: 03/12/03

## Alternative 1:

1. For measurements that are expressed as averages, performance delivered to a CLEC for each observation shall not exceed the ILEC averages plus the applicable critical Z-value. If the CLEC's performance is outside the ILEC average plus the critical Z-value and it is the second consecutive month, SBC SNET can utilize the Z-test as applicable for sample sizes 30 or greater or the permutation test to provide evidence of parity. If SBC SNET uses the Z-test for samples under 30, the CLEC can independently perform the permutation test to validate SBC SNET's results.
2. For measurements that are expressed as percentages, the percentage for CLEC shall not exceed ILEC percentage plus the applicable critical Z-value. If the CLEC's performance is outside the ILEC percentage plus the critical Z-value and it is the second consecutive month, SBC SNET can utilize the Z-test as applicable for sample sizes 30 or greater or the permutation test to provide evidence of parity. If SBC SNET uses the Z-test for samples under 30, the CLEC can independently perform the permutation test to validate SBC SNET's results.

## Alternative 2:

Permutation analysis will be applied to calculate the z-statistic using the following logic:

1. Choose a sufficiently large number T.
2. Pool and mix the CLEC and ILEC data sets
3. Randomly subdivide the pooled data sets into two pools, one the same size as the original CLEC data set ( $n_{CLEC}$ ) and one reflecting the remaining data points, (which is equal to the size of the original ILEC data set or  $n_{ILEC}$ ).
4. Compute and store the Z-test score ( $Z_S$ ) for this sample.
5. Repeat steps 3 and 4 for the remaining T-1 sample pairs to be analyzed. (If the number of possibilities is less than 1 million, include a programmatic check to prevent drawing the same pair of samples more than once).
6. Order the  $Z_S$  results computed and stored in step 4 from lowest to highest.
7. Compute the Z-test score for the original two data sets and find its rank in the ordering determined in step 6.
8. Repeat the steps 2-7 ten times and combine the results to determine P = (Summation of ranks in each of the 10 runs divided by 10T)
9. Using a cumulative standard normal distribution table, find the value  $Z_A$  such that the probability (or cumulative area under the standard normal curve) is equal to P calculated in step 8.
10. Compare  $Z_A$  with the desired critical value as determined from the critical Z table. If  $Z_A >$  the designated critical Z-value in the table, then the performance is non-compliant.

#### **IV. Methods Of Calculating Per Occurrence Voluntary Payments**

##### **Measurements For Which The Reporting Dimensions Are Averages Or Means.**

- Step 1: Calculate the average or the mean for the measurement for the CLEC that would yield the Critical Z-value for the third consecutive month. Use the same denominator as the one used in calculating the Z-statistic for the measurement. (For benchmark measurements, substitute the benchmark value for the value calculated in the preceding sentences).
- Step 2: Calculate the percentage difference between the actual average and the calculated average for the third consecutive month.
- Step 3: Multiply the total number of data points by the percentage calculated in the previous step. Calculate the average for three months and multiply the result by \$1500, \$900, and \$600 for Measurements that are designated as High, Medium, and Low respectively; to determine the applicable assessment payable to the U.S. Treasury for that measure.

##### **Measurements For Which The Reporting Dimensions Are Percentages.**

- Step 1: Calculate the percentage for the measurement for the CLEC that would yield the Critical Z-value for the third consecutive month. Use the same denominator as the one used in calculating the Z-statistic for the measure. (For benchmark measurements, substitute the benchmark value for the value calculated in the preceding sentences).
- Step 2: Calculate the difference between the actual percentage for the CLEC and the calculated percentage for each of the three non-compliant months.
- Step 3: Multiply the total number of data points by the percentage calculated in the previous step. Calculate the average for three months and multiply the result by \$1500, \$900, and \$600 for measurements that are designated High, Medium, and Low respectively; to determine the applicable assessment payable to the U.S. Treasury.

##### **Measurements For Which The Reporting Dimensions Are Ratios Or Proportions.**

- Step 1: Calculate the ratio for the measurement for the CLEC that would yield the Critical Z-value for the third consecutive month. Use the same denominator as the one used in calculating the Z-statistic for the measure. (For benchmark measurements, substitute the benchmark value for the value calculated in the preceding sentences).
- Step 2: Calculate the percentage difference between the actual ratio for the CLEC and the calculated ratio for each month of the non-compliant three-month period.
- Step 3: Multiply the total number of service orders by the percentage calculated in the

Deleted: 03/13/03

previous step for each month. Calculate the average for three months and multiply the result by \$1500, \$900, and \$600 for measurements that are designated as High, Medium, and Low respectively; to determine the applicable assessment for that measure.

**Measurements for Which Payment Is Per Occurrence With A Cap**

Voluntary payments are calculated on a per occurrence basis in accordance with the methodologies described above and are payable up to the caps identified in Attachment A-4.

**V. Methods Of Calculating Per Measurement Voluntary Payments**

Per measurement voluntary payments are payable as detailed in the Voluntary Payments Table below if the actual Z-value exceeds the critical Z-value.
